What is Xanax 2mg and How Does It Work?

Xanax belongs to the benzodiazepine class of medications, which work by enhancing the effects of gamma-aminobutyric acid (GABA), a neurotransmitter in the brain. This helps slow excessive nerve activity, producing a calming effect.

The 2mg dosage is generally prescribed for moderate to severe anxiety or panic disorders. Taken as directed, Xanax 2mg starts working within 30–60 minutes, helping to reduce anxiety, calm racing thoughts, and promote relaxation. It is highly effective for short-term management of acute stress and panic episodes.
